Health Diagnostic Laboratory, Inc. Fact Sheet

- Stories of people surprised by sudden heart attacks are becoming more common. It is perplexing that these patients had not been identified as at risk for heart disease. Today’s extremely limited cholesterol tests are failing to indentify the majority of people who are at risk for heart attacks.

- 50% of people with coronary artery disease have blood cholesterol levels similar to those of people who do not develop the disease. As a result, there has been a monumental shift in the overall scientific understanding of the role of low-density and high-density lipoproteins in metabolic disorders and coronary heart disease (CHD) events.

- After 50+ years of research it is now proven that physicians must measure more.

- HDL, Inc.’s new preventative model provides physicians with more advanced tools and scientific evidence to predict angiographic disease or coronary heart disease events. HDL, Inc. moves beyond total cholesterol and outdated measurement techniques, and instead provides physicians with comprehensive and accurate information that surpasses the reach of conventional HDL and LDL analysis. Physicians therefore can do more than diagnose disease; they can focus on all of the cholesterol components and residual risk factors or biomarkers, and their impact on overall health.

- Health Diagnostic Laboratory, Inc. takes a systems biology approach to eliminate assumptions and provide early dedication through evidence based medicine. HDL, Inc. represents a partnership between laboratory, physician, and patient - marking a new era in medical history.

- Health Diagnostic Laboratory, Inc. offers a comprehensive panel of tests to help physicians personalize treatment based on an expanded, total patient profile. The result -- earlier detection of residual risk factors pre-disposing patients to disease, more advanced evidence-based treatments, and fewer patients progressing to overt disease.

- The founders of HDL, Inc., a fully CAP/CLIA accredited clinical laboratory, have a rich history of serving at the forefront of renowned medical, educational, and industrial institutions. They use a comprehensive systems biology approach to eliminate surprises and reverse the alarming increase in chronic disease.

- HDL, Inc. provides additional services including: rapid identification of advanced cardiovascular risk markers; interpretation of test results; advanced color-coded lab results that are more comprehensive/easier to interpret; access to health education tailored to specific risks; web-based personal health record and patient portal; and discriminating metrics allowing for more precise medication titration/targeted therapies.
